DENIS KORINŠEK

Senior Android Engineer | Technical Lead

Prevalje, Slovenia • korinsekdenis@gmail.com • linkedin.com/in/denis-korinsek

Professional profile

Senior Android Engineer with 10+ years of experience in Android development across banking, fintech, payments, and digital identity. Currently developing applications for a mobile banking platform serving 100+ Swiss banks, working across legacy Java and modern Kotlin/Jetpack Compose solutions.

Previously led Android development for fintech integrations at GlobalID, including Uphold, and contributed to a non-custodial cryptocurrency wallet. Combines hands-on engineering and architectural decision-making with technical leadership and people management, currently managing 5 Android engineers.

Professional experience

KAMINO → NETCETERA (NOW G+D NETCETERA)

September 2017 – Present

Senior Android Developer | Team Lead | Line Manager	**Jan 2025–Present**
Senior Android Developer | Line Manager	May 2023–Dec 2024
Team Lead | Android Developer	Nov 2021–Oct 2023
Android Tech Lead, Payments	May 2020–Nov 2021
Android Developer	Sep 2017–Apr 2020

Kamino was acquired by Netcetera in 2023.

Swiss Mobile Banking Platform

G+D Netcetera

November 2023 – Present

Android feature development for a shared mobile banking platform serving 100+ Swiss banks, combining reusable platform functionality with bank-specific customizations.

- **Card Management & Banking Features:** Developed card-management, account, and transaction features, contributing to architectural decisions, business logic, and banking service integrations.
- **Secure Integrations:** Designed and implemented secure WebView integrations with deep-link handling and security controls.
- **Android Modernization:** Contributed to the gradual migration from XML to Jetpack Compose, developing new Compose screens and reusable UI components.
- **Multi-Contract & Multi-Device:** Designed and implemented functionality for managing multiple banking contracts and accounts, accessing contracts across devices, and managing registered devices.
- **Technical Leadership:** Guide technical decisions, conduct code reviews, resolve complex issues, and collaborate directly with clients and distributed engineering teams.

GlobalID — Digital Identity & Fintech Platform

Kamino

May 2020 – October 2023

Android development and technical leadership for an international digital identity and financial services platform.

- **Technical Leadership:** Served as technical lead for 4–5 Android developers, providing architectural guidance, code reviews, and mentoring.
- **Uphold Integration:** Led the end-to-end Android integration enabling account linking, balance management, cryptocurrency trading, and fund transfers. Resolved integration blockers through direct collaboration with Uphold.
- **Non-Custodial Wallet:** Contributed to the architecture and implementation of an ERC-20 and Solana token wallet using Trust Wallet Core, including key management and transaction signing.
- **USBC Token:** Developed an ERC-20 token on a private network that grew into a new business.
- **Identity & Messaging:** Developed digital identity verification and in-app chat features.
- **Cross-Functional Collaboration:** Coordinated technical work across internationally distributed Android, iOS, backend, and QA teams.

International Client Projects

Kamino

September 2017 – April 2020

Developed Android applications for international clients across multiple agency projects.

Earlier experience

Ceneje.si • Full-Stack & Android Developer 2015–2017

Frontend, backend, and Android application development for the Ceneje.si price comparison platform.

Kivi Com • Full-Stack Developer 2014–2015

Web development for multiple clients, including the Chamber of Commerce and Industry of Slovenia (GZS).

MAOP • Full-Stack Developer 2013–2014

Technical expertise

Android: Kotlin, Java, Android SDK, Jetpack Compose
Architecture: MVVM, Clean Architecture, Modularization
Asynchronous Programming: Kotlin Coroutines, StateFlow, SharedFlow
Dependency Injection: Koin, Dagger
Testing: JUnit, MockK, Robolectric, Turbine
Networking: REST APIs, Retrofit, OkHttp
Security & Cryptography: Secure Storage, Cryptographic Key Management, Transaction Signing, Secure WebView Integrations
AI-Assisted Engineering: Claude Code, GitHub Copilot, ChatGPT — daily use for development, refactoring, testing, code review, and rapid prototyping.

Education

University of Ljubljana — Faculty of Computer and Information Science

- **Master's Degree in Computer Science and Informatics Education**
- Bachelor's Degree in Computer Science and Informatics
